

Retrofit the built environment for nature

Aim

Enhancing climate resilience by integrating nature-based solutions into existing urban infrastructure. This includes cooling measures, water retention systems, and ensuring equal access to green spaces.

Stakeholders

Neighbourhood associations, private landowners, local businesses, city council, media, universities, schools, planners, and architects.

First Steps

- Introduce rain gardens, vertical planting, and green roofs.
- Break up concrete spaces to create microhabitats.
- Provide training on implementing nature-based retrofits.
- Link retrofitted spaces to existing green corridors.
